

ANDREI CUPRINSU

GAMEPLAY & ENGINE PROGRAMMER

ABOUT ME

I specialize in **gameplay and engine programming**, comfortable moving between low-level C++ engine systems, Unreal Engine 5 gameplay mechanics, and the build/tooling infrastructure that keeps a team shipping. I have a personal interest in optimization and CI/CD tooling, but I also enjoy building gameplay systems end-to-end – from mechanics prototyping through to shipped, playable builds.

ACADEMIC HISTORY

Programming – B.Sc

International Game Architecture & Design (IGAD)
Breda University of Applied Sciences
Sep. 2022 – 2026

SKILLSET

C++

5+ years of experience

Unreal Engine 5

C++ & Blueprints

Custom Engine Development

Resource management, particle systems, editor/debug tooling (ImGui)

Dynamic Scripting

Lua integration for runtime-scriptable behavior

Gameplay Systems

GAS, AI/EQS, multiplayer replication

Multiplayer / Networking / Replication

Currently building depth here – EOS, replication fundamentals, still learning

CI/CD & Infrastructure

Jenkins, Perforce (incl. server administration), Git, Net-Bird VPN, automated profiling

Platform Integration

Steam SDK, Steam Deck, cross-platform builds

Reinforcement Learning

DQN agents, PyTorch, custom training environments

Applied Graphics Math

Ray tracing, mesh boolean operations (CSG/SDF), 3D math

Technical Documentation

Authored internal studio documentation for team-wide systems

Shaders / Rendering

Some exposure – outline/stencil shaders, basic material work and optimization

Python

1–2 years, tooling, scripting & small apps

Java

1 year of experience – database-oriented work

Brief Exposure

OpenGL, Bullet Physics, Kotlin, JavaScript – brief, occasional use

EXPERIENCE

Monkey Strike Games - Startup

Sep. 2025 –
Sep. 2026

Technical Lead / Graduate Programmer

Pizzapocalypse 2

- Set up and maintain Perforce, Jenkins CI/CD, and Net-Bird VPN infrastructure for a UE5.6 production
- Built a Jenkins-triggered automated profiling pipeline with input record/replay, and a custom Steam Input plugin from scratch
- Implemented PSO precaching/bundling and owned rendering optimization (shadow culling, HISM/ISM tooling, baked lighting) for forward-shaded, densely set-dressed levels, plus lower-level CPU optimizations

DrinkUpCowboy

- Working on multiplayer and replication systems, an area I'm actively building depth in

Owlet - PEPI engine

Team RTS on a custom C++ engine

Y2 2024 - BUAS
Team Project

- Sole owner of Steam API integration and Steam Deck compatibility
- Built engine gameplay/UI systems: buff towers, debug metrics, unit selection, order raycasting

Dreadtome

Unreal Engine 5 team production

Y3 2024 - 2025 -
BUAS
Team Project

- Owned the save/checkpoint system (3 major iterations) and an automated, Perforce-integrated profiling pipeline
- Built and iterated on enemy AI systems (behavior, navigation, turret movement), plus early gameplay-mechanic prototyping

RL Racing Agent Trainer

Solo AI/ML project, C++/Python

Y2 2023 - BUAS
Personal Project

- Trained and compared multiple reinforcement-learning algorithms on a shared racing environment
- Created the training environment and reward system, then profiled and optimized training-loop performance

BEE Engine

Custom C++ engine core systems

Y2 2023 - BUAS
Team Project

- Built the resource manager, particle system (2 major redesigns), and Lua scripting subsystem

INTERESTS

- Small-scale personal proof-of-concept projects
- Idle/incremental/survival games
- Reading
- Learning new things

CALL TO ACTION

If you have any questions about my resume, or just want to chat, feel free to reach out.
